Adaptive automation: Use your own style or read from style libraries to dynamically update your drawings in real time. Panoramic View: Create custom views that seamlessly switch from a 2D view of your model to a large-scale 3D view of the entire model or any individual section of the model. Simplified views and filters: Select the individual views that are most important to you. Filter out the views and features that aren't relevant to you. Or use simple views and filters in the same way as in previous releases. Speed performance: Get to the information you need faster. Or design workflows that automatically adapt to changing requirements, tasks, or what you're working on at any time. Maximize your productivity and control: Save time and keep your drawings organized. Create projects by naming and organizing your folders and files. Keep your drawings up-to-date and consistent. Automatically sync drawings with other programs, so you can easily reference your models. Key features and changes: Additional features and refinements included in this release.
